

## Final Deliverables Report

<b>Date</b>	14.11.2022
<b>Team ID</b>	PNT2022TMID13093
<b>Project Name</b>	Inventory Management System for Retailers

### Team members and their Contribution:

<b>Name</b>	<b>Roll no</b>	<b>Contribution</b>
Abishek L R	7180191303	Frontend – 5 Pages, Integration of Sendgrid, Deployment of using docker and Kubernetes.
Kaaviya A	7180191325	Frontend – 5 Pages, Documentation
Prediksha R L	7180191337	Frontend – 4 Pages, Documentation
Yaswanth M	7180191361	Backend Fully (For all 14 Pages), Integration of IBM Cloud, Deployment of using docker and Kubernetes.

### Introduction:

1. Sprint 1 – Backend
2. Sprint 2 – Frontend
3. Sprint 3 – IBM Cloud Integration + Integration of SendGrid
4. Sprint 4 – Deploying the application using Docker and Kubernetes

## Sprint 1 – Backend:

All the routes to each page and APIs are created.

Example, (For Products page)

The screenshot displays the Visual Studio Code editor with a project named 'IMSR-1'. The Explorer sidebar on the left shows the file structure, including 'app.py', 'requirements.txt', 'email\_alert.py', and a 'templates' directory. The main editor window shows the 'app.py' file with the following code:

```
22
23 #Products
24 @app.route('/products')
25 def products():
26     sql = "SELECT * FROM products"
27     stmt = ibm_db.prepare(conn, sql)
28     result=ibm_db.execute(stmt)
29
30     products=[]
31     row = ibm_db.fetch_assoc(stmt)
32     while(row):
33         products.append(row)
34         row = ibm_db.fetch_assoc(stmt)
35     products=tuple(products)
36     #print(products)
37
38     if result>0:
39         return render_template('products.html', products = products)
40     else:
41         msg='No products found'
42         return render_template('products.html', msg=msg)
43
44 #Locations
45 @app.route('/locations')
46 def locations():
47
```

Below the code editor, the TERMINAL panel shows the output of running the application:

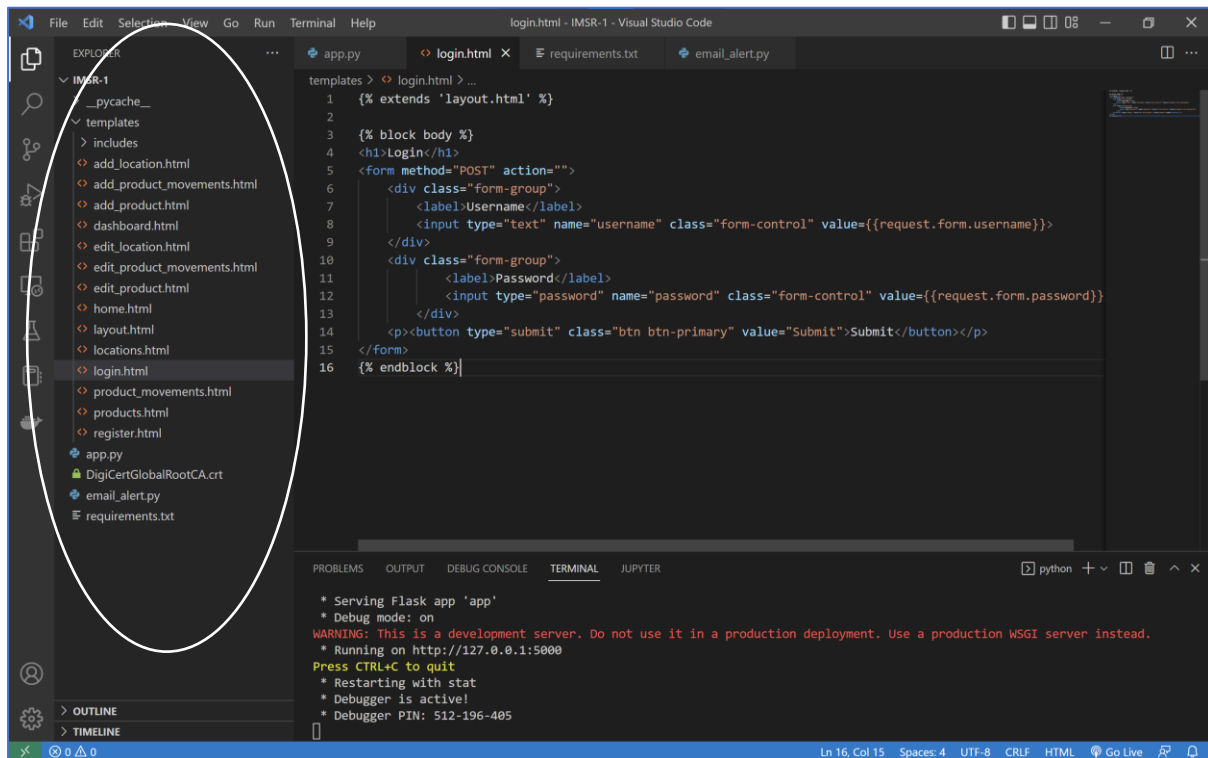

```
* Serving Flask app 'app'
* Debug mode: on
WARNING: This is a development server. Do not use it in a production deployment. Use a production WSGI server instead.
* Running on http://127.0.0.1:5000
Press CTRL+C to quit
* Restarting with stat
* Debugger is active!
* Debugger PIN: 512-196-485
```

The status bar at the bottom indicates the file is at line 33, column 29, using UTF-8 encoding, and the Python interpreter is 3.10.7 64-bit.

## Sprint 2 – Frontend:

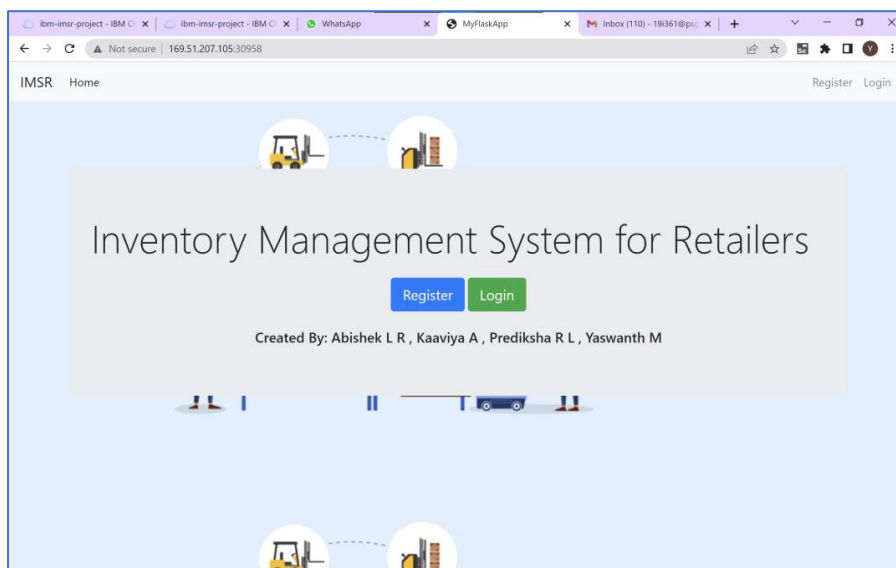

The frontend is written using HTML, CSS (using Bootstrap) and JavaScript for all the pages to which the routes created in Sprint 1.

For Example, (The Hierarchy of different pages and the code for login page)

Sample FrontEnd Pages,

Home Page,

## Login Page,

A screenshot of a web browser displaying the login page of a web application. The browser's address bar shows the URL "169.51.207.105:30958/login". The page has a header with "IMSR" on the left and "Home", "Register", and "Login" on the right. The main content area is titled "Login" and contains two input fields: "Username" and "Password". Below these fields is a blue "Submit" button.

IMSR Home Register Login

### Login

Username

Password

Submit

## Register Page,

A screenshot of a web browser displaying the register page of a web application. The browser's address bar shows the URL "169.51.207.105:30958/register". The page has a header with "IMSR" on the left and "Home", "Register", and "Login" on the right. The main content area is titled "Register" and contains five input fields: "Name", "Email", "Username", "Password", and "Confirm Password". Below these fields is a blue "Submit" button.

IMSR Home Register Login

## Products Page,

Products

Add Product

Product ID	Product Cost	Product Quantity		
Bedspreads	600	100	Edit	Delete
Cutlery	1500	495	Edit	Delete
Shampoo	50	520	Edit	Delete

## Product Movements Page,

Product Movements

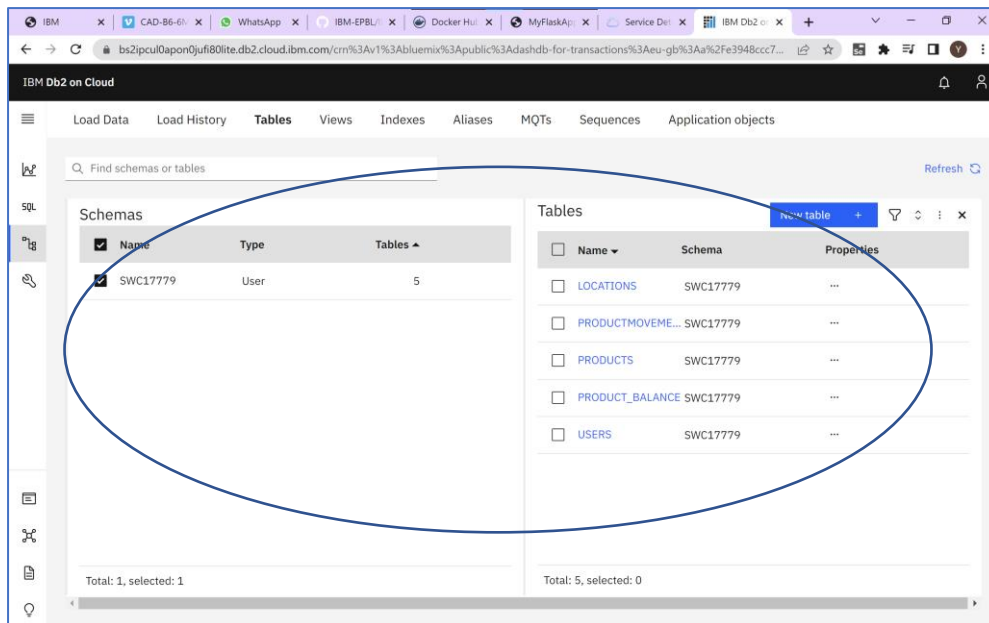

Add Product Movements

Movement ID	Time	From Location	To Location	Product ID	Quantity	
41	2022-11-14 04:32:57.213981	Chennai	Main Inventory	Shampoo	20	Delete
42	2022-11-14 04:51:47.519001	Chennai	Karnataka	Shampoo	1553	Delete
40	2022-11-14 03:57:52.649656	Bangalore	Chennai	Shampoo	100	Delete

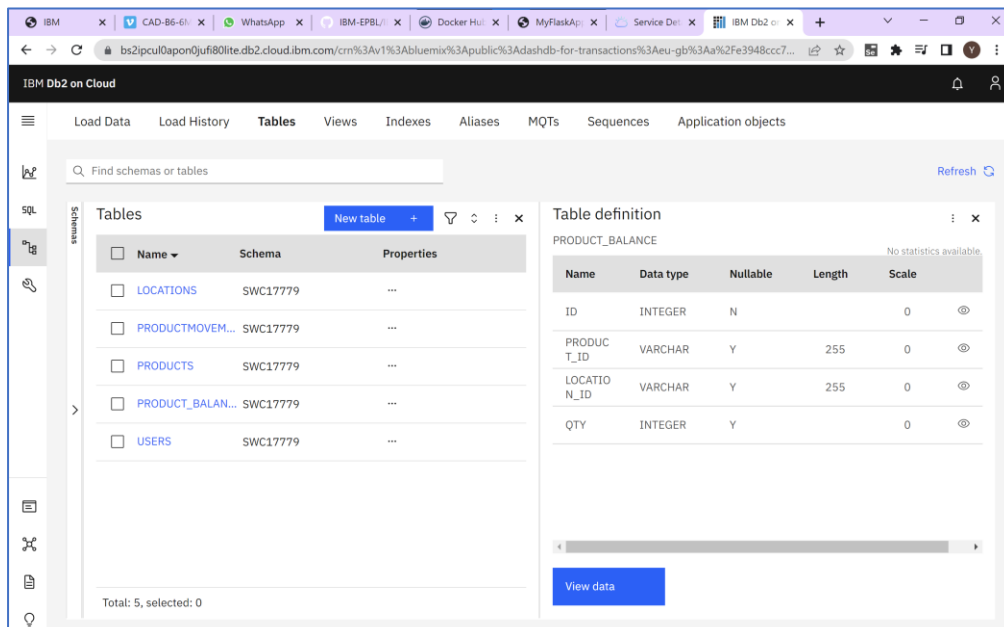

### Sprint 3 - IBM Cloud Integration + Integration of SendGrid:

#### IBM Cloud Integration:

5 tables created for our project,

Schema of the particular table (For Example, Product\_Balance)

Data of a particular table (For Example, Product\_Balance)

The screenshot shows the IBM Db2 on Cloud web interface. The 'Tables' tab is selected, displaying the 'SWC17779.PRODUCT\_BALANCE' table. The table has four columns: ID, PRODUCT\_ID, LOCATION\_ID, and QTY. There are 8 rows of data. An 'Export to CSV' button is visible in the top right corner of the table view.

ID	PRODUCT_ID	LOCATION_ID	QTY
1	Shampoo	Kerala	1350
2	Bedspreads	Kerala	100
3	Shampoo	Chennai	1452
4	Shampoo	Mumbai	100
5	Shampoo	Karnataka	-202
6	Shampoo	Punjab	100
7	Shampoo	Bangalore	-451
8	Cutlery	Bangalore	55

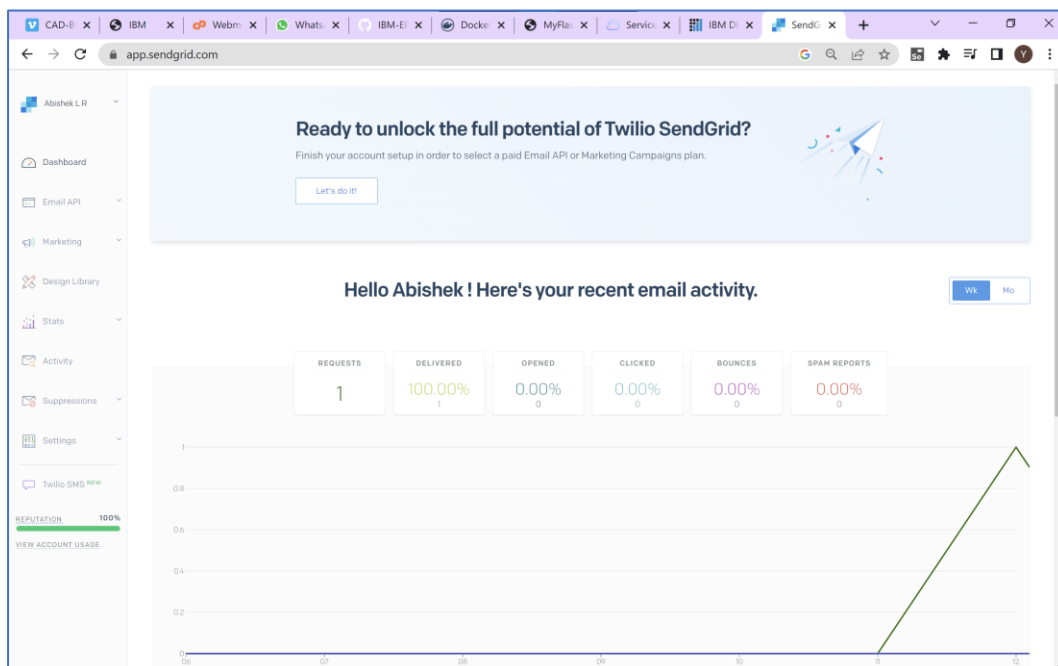

Code for Connection of IBM Database,

```
conn=ibm_db.connect("DATABASE=bludb;HOSTNAME=55fbc997-9266-4331-afd3-888b05e734c0.bs2io90l08kqb1od8lcg.databases.appdomain.cloud;PORT=;SECURITY=SSL;SSLServerCertificate=DigiCertGlobalRootCA.crt;UID=;PWD=;",',',')
```

**Note:** DigiCertGlobalRootCA.crt should be downloaded and configured within the project folder.

### SendGrid Integration:

Creation of SendGrid account,

Code for email alert:

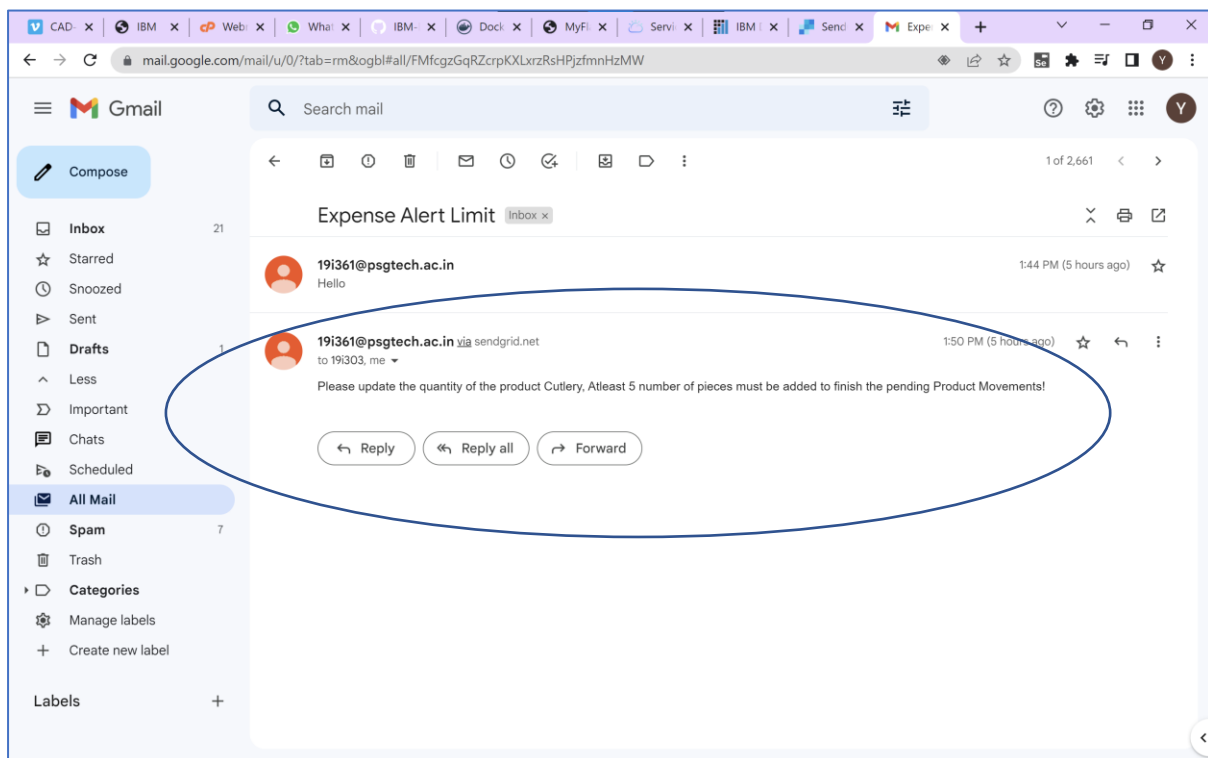

```
1 import smtplib
2 from email.mime.multipart import MIMEMultipart
3 from email.mime.text import MIMEText
4 from email.mime.base import MIMEBase
5
6 def alert(main_msg):
7     mail_from = '191361@psgtech.ac.in'
8     mail_to = '191303@psgtech.ac.in'
9     msg = MIMEMultipart()
10    msg['From'] = mail_from
11    msg['To'] = mail_to
12    msg['Subject'] = 'Alert Mail On Product Shortage! - Regards'
13    mail_body = main_msg
14    msg.attach(MIMEText(mail_body))
15
16    try:
17        server = smtplib.SMTP_SSL('smtp.sendgrid.net', 465)
18        server.ehlo()
19        server.login('apikey', 'API_KEY')
20        server.sendmail(mail_from, mail_to, msg.as_string())
21        server.close()
22        print("mail sent")
23    except:
24        print("issue")
25
```

PROBLEMS OUTPUT DEBUG CONSOLE TERMINAL JUPYTER

```
* Detected change in 'C:\Users\yaswa\Downloads\IBM\inventory_management_system_flask-master copy\IMSR-1\email_alert.py', reloading
* Restarting with stat
* Debugger is active!
* Debugger PIN: 512-196-405
* Detected change in 'C:\Users\yaswa\Downloads\IBM\inventory_management_system_flask-master copy\IMSR-1\email_alert.py', reloading
* Restarting with stat
```

Email Received on Shortage of materials at particular warehouse or Main Inventory:

## Sprint 4 (Deploying the application using Docker and Kubernetes):

**Note:** Make sure to create a Dockerfile in the project folder.

Login into DockerHub in Project Folder using command prompt. This connects local docker desktop to cloud docker hub.

```
C:\Windows\System32\cmd.exe
Microsoft Windows [Version 10.0.19044.2130]
(c) Microsoft Corporation. All rights reserved.

C:\Users\yaswa\Downloads\IBM\inventory_management_system_flask-master copy\IMSR-1>docker login
Authenticating with existing credentials...
Login Succeeded

Logging in with your password grants your terminal complete access to your account.

Traceback (most recent call last):
```

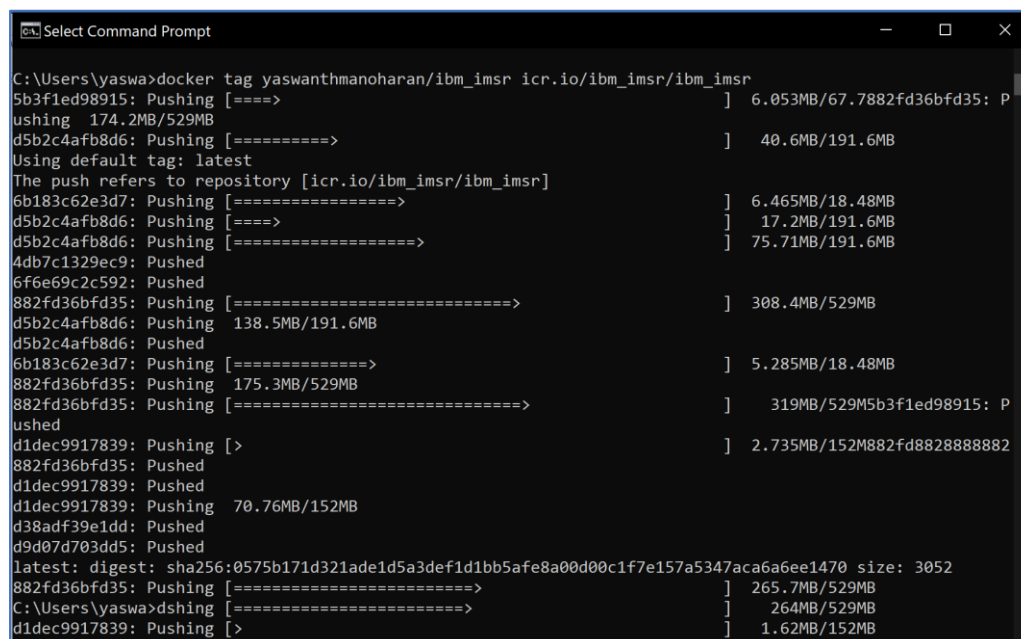

Create a valid Deployment.yaml file,

```
PS C:\Users\yaswa\Downloads\IBM\IMSR-1> kubectl apply -f deployment.yaml
deployment.apps/ibmimsr created
PS C:\Users\yaswa\Downloads\IBM\IMSR-1> 
```

Create a namespace in IBM Container registry,

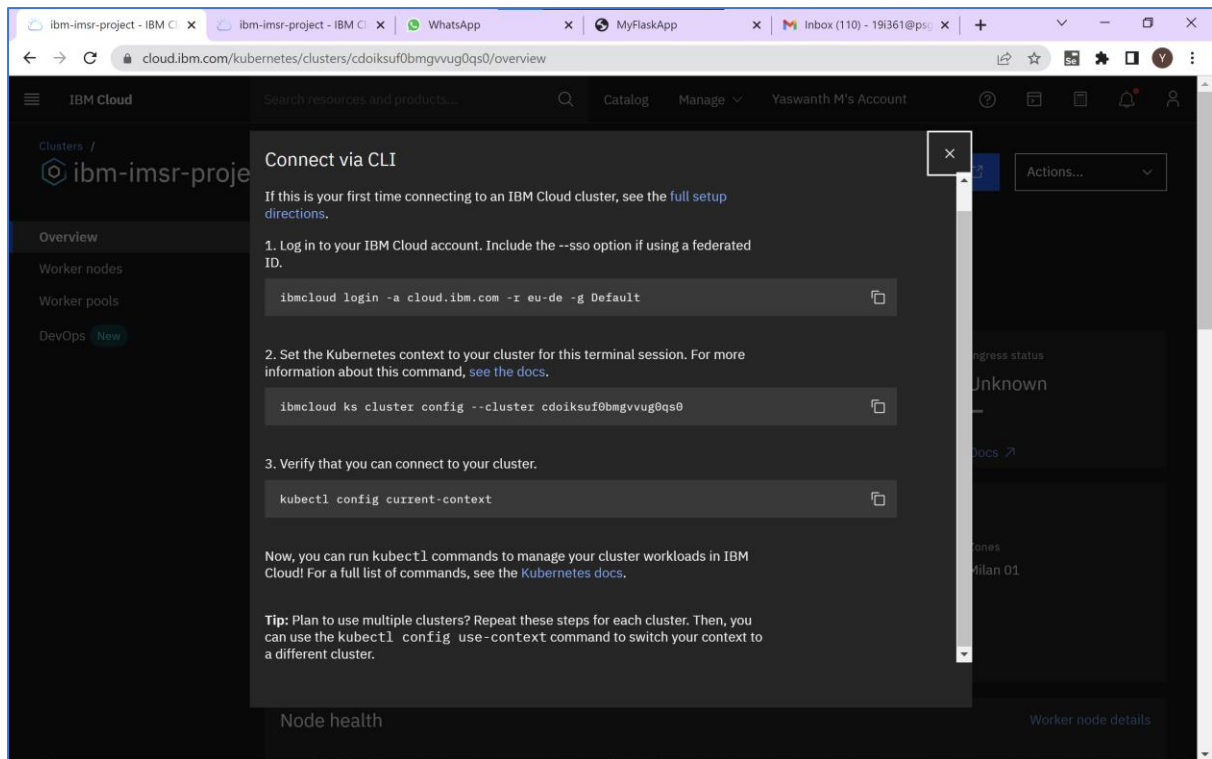

Pushing the project into IBM container Registry,

**Note:** Create a Kubernetes Cluster in IBM Cloud and wait for the work node to get fully deployed.

Then, Login into Kubernetes Cluster using the following commands,

Expose your application using the following command and check for the port number using the next command.

```
Command Prompt
C:\Users\yaswa>
The configuration for cdoiksuf0bmgvvug0qs0 was downloaded successfully.
Added context for cdoiksuf0bmgvvug0qs0 to the current kubeconfig file.
You can now execute 'kubectl' commands against your cluster. For example, run 'kubectl get nodes'.
If you are accessing the cluster for the first time, 'kubectl' commands might fail for a few seconds while RBAC synchronizes.

C:\Users\yaswa>kubectl get pods
NAME                                READY   STATUS             RESTARTS   AGE

C:\Users\yaswa>kubectl expose deployment ibmimsr --type=NodePort --name=ibmimsr
service/ibmimsr exposed

C:\Users\yaswa>kubectl describe service ibmimsr
error: unknown command "describe" for "kubectl"
Did you mean this?
  describe

C:\Users\yaswa>kubectl describe service ibmimsr
Name:         ibmimsr
Namespace:    default
Labels:       app=ibmimsr
Annotations:  <none>
Selector:     app=ibmimsr
Type:         NodePort
IP Family Policy: SingleStack
IP Families:  IPv4
IP:           172.21.98.28
IPs:          172.21.98.28
Port:         <unset> 5000/TCP
TargetPort:   5000/TCP
NodePort:     <unset> 30958/TCP
Endpoints:    172.30.116.13:5000
Session Affinity: None
External Traffic Policy: Cluster
Events:       <none>

C:\Users\yaswa>
```

Then, Check for the public IP address in your IBM Kubernetes Cluster under Worker Node,

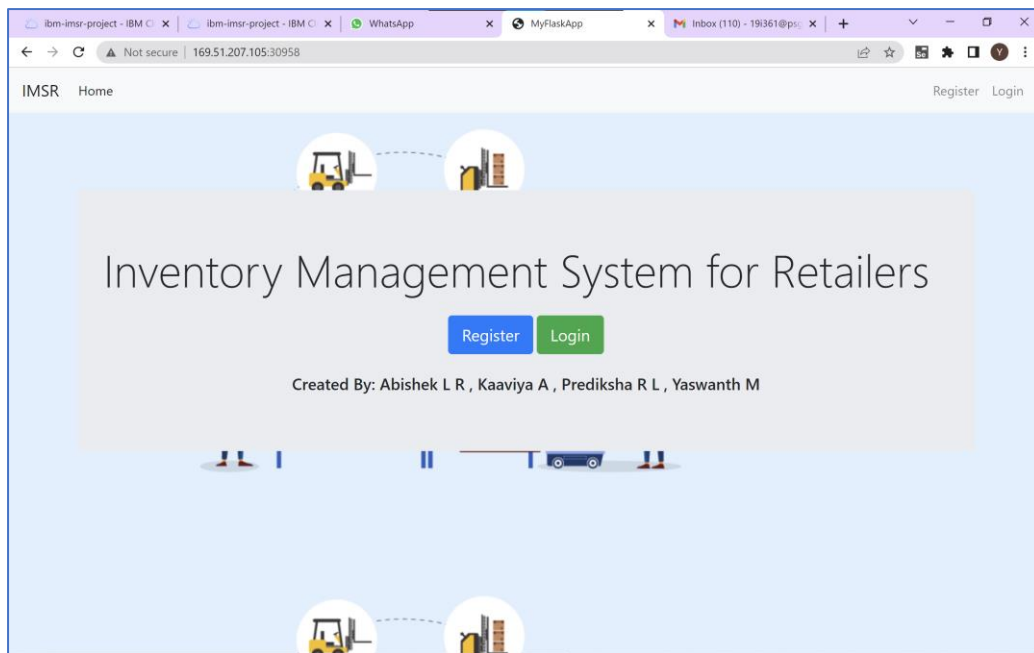

Thus we have the Public IP address and the Nodeport.

Now just type in this format - <Public\_IP>:<NodePort>

For our Inventory management system application it is, **169.51.207.105:30958**

Type this in the browser and click enter to access the deployed application,

#### Result:

Thus In this way We developed a “Inventory management System for Retailers” using Python, Sendgrid and IBM Cloud Services (IBM DB2, IBM Container registry, IBM Kubernetes).
